

# TM3000 The solution for sustainable farming.

# TM3000 The solution for sustainable farming.

The new TM3000, designed according to the **BLUE TIRE** Technology, is the Trelleborg's answer to the latest and future generations of harvesters and combine machines. A new tread pattern, along with the advanced carcass design, maximise the load capacity of the tyre at low inflation pressure.

## Sustaining productivity

TM3000 respects the soil and boosts crop yield while preserving the environment. Matching sustainable and precision farming approaches, TM3000 is the right choice to increase the

productivity of your farm, lowering overall operating costs whilst looking after the safety and comfort of the operators.

Sharp inclination of the lug to provide excellent stability on slopes

Increased lug base diameter to improve manoeuvrability and reduce stress in the shoulder area

Inter-lug terracing at the base of the lug to maximise the self-cleaning capability of the tyre

Rounded shoulder profile to prevent stubble damage, results in high durability

Rounded lug base to support the tyre during combine steering

Printed on  
recycled paper

# Extra wide footprint

The latest tests performed by Trelleborg show that the TM3000's footprint is up to 5% wider than its premium competitor.

The larger contact area of the TM3000 significantly reduces soil compaction. The wide footprint area provides better flotation

characteristics than competition, respecting the soil and preserve its organic life by minimising mechanical damage caused by compression.
